

RESEARCH &  
SURVEILLANCE CENTRE

## **Are you interested in learning about and getting involved in flu, covid, and other infectious disease surveillance?**

*If so, we'd love to hear from you.*

We work with your surgery, and other surgeries across England, to understand patterns of disease spread in the community. This is called “disease surveillance”. Disease surveillance involves collecting biological samples from volunteer patients, who consent to take part. The information gathered aims to help promote public health.

### **About us**

We are the research and surveillance centre (RSC), based at the university of Oxford. We work closely with the Royal College of General Practitioners (RCGP) and UK Health Security Agency (UKHSA).

### **Opportunities to learn more and get involved.**

We have a monthly newsletter that covers different disease surveillance learning topics every month. It also includes opportunities to provide feedback and get involved in our work.

**Please get in touch by email:**
